

PRESS RELEASE

Encentuate Customer Recognised for Best IT Security Strategy Encentuate helps JTC Corporation win MIS Asia IT Excellence Award

Redwood City, Calif. - March 16, 2007 - Encentuate, Inc., a leading provider of enterprise end-point identity and access management solutions, today announced that its customer, JTC Corporation, the Corporate and building parks development arm of Jurong Town Council Singapore has received the MIS ASIA IT Excellence Award in the IT Security Strategy category for its implementation of Encentuate's end-point identity and access management (IAM) solution. The MIS Asia IT Excellence Awards attracted more than 40 entries from 11 countries in Asia. The IT Security Strategy award category recognises IT teams with sound security enforcement policies, as well as an ability to innovate in managing security risks and reducing the workload associated with patching servers and desktops. JTC was recognised for its outstanding achievements in business-driven IT at the 4th annual MIS IT Excellence Awards gala dinner in August 2006.

Encentuate TCI provides JTC with a comprehensive and user-friendly identity and access management solution that combines single sign-on and sign-off in heterogeneous environments, secure remote access, authentication management, and user-centric auditing and reporting. The solution ensures that users can easily and securely access JTC's corporate network and information, both from within the office perimeter or from remote locations.

"We are pleased with the recognition that JTC is receiving from the region's industry media for improving its IT operations, and honored that we were able to play a vital role in the company's success," said Kuo-Yi Lim, Vice President, Asia Pacific Operations at Encentuate. "The award is both recognition for one of our valuable customer and validation of Encentuate's efforts to deliver solutions that balance the enterprise and IT requirements for compliance and security with the end-user imperative for convenience."

JTC's Strong Digital Identity project, based on Encentuate TCI, was the basis for its MIS Asia IT Excellence award submission. Faced with increasing password-related helpdesk requests and a mandate from government regulations requiring the use of two-factor authentication to secure remote-access, JTC began searching for a comprehensive solution.

JTC needed a solution that could help simplify the user login experience, enhance productive use of IT systems, minimise the use of IT resources for non-strategic efforts such as password related calls, and widely enable secure remote access to all users by providing two-factor authentication.

"Upon implementing the Strong Digital Identity project, we are able to increase employee productivity and meet the security mandate," said Chee-Yuen Yap, Group Chief Information Officer and Chief Knowledge Officer at JTC. "The project unifies and simplifies the login experience for all users, at all network, application and remote access points. The solution strengthens remote access to our corporate network through two-factor authentication for all users, and reduces helpdesk costs as

account lockouts and password reset calls are minimized. The MIS Asia IT Excellence Award is testimony of the winning formula of integrating the talent of JTC's IT team with leading technology."

Entries for the MIS Asia IT Excellence Awards were received from organizations throughout Asia in both the private and public sector. A panel of 12 judges, comprising CIOs and IT directors, academics and analysts, judged all entries based on how well the organizations used IT to drive revenue, sales or other business-linked measurement.

About Encentuate

Encentuate is a leading provider of enterprise end-point identity and access management solutions that help customers cost effectively simplify access to corporate information, strengthen security, and track compliance at enterprise end points without requiring changes to existing IT infrastructure. Encentuate is headquartered in Silicon Valley, Calif. and has offices across North America and in Singapore. Encentuate's customers span a range of industries, including healthcare, biotechnology, government and financial services. In 2006, Encentuate was recognized by SC Magazine as the best single sign-on and best two-factor authentication solution.
